Single-return bank

This is one host-facing bank for a single DJ FX return. Each entry loads one plugin; it is not a new multi-effect plugin.

DJ RETURN / VOCAL THROW

Plugin: SACREDVERB

Concept: Short-to-medium transition tail for a final word, stab, or phrase.

Guardrail: Keep the dry deck path present; match the return level before the set.

DJ RETURN / TRANSITION SPACE

Plugin: EchoLocate

Concept: A controlled lift into the next section with send automation.

Guardrail: The send is the performance control; avoid riding plugin output live.

DJ RETURN / WIDE BREAK

Plugin: PARALLAX

Concept: Moderate width/depth for an intro, breakdown, or atmospheric handoff.

Guardrail: Check mono and keep low-frequency content centered.

DJ RETURN / DEEP RETURN

Plugin: NSR

Concept: Darker, deeper return that adds space without masking the dry deck.

Guardrail: Use a conservative ceiling and reduce the send if punch softens.

DJ RETURN / CLUB SAFE FX

Plugin: SACREDVERB

Concept: Matched-level, restrained return for a full-range club system.

Guardrail: Compare bypassed and engaged states at equal perceived loudness.

DJ RETURN / DRY/WET CUT

Plugin: NTRSTLLR

Concept: Fast host automation on the send for rhythmic cuts and fills.

Guardrail: Do not automate the dry deck away; verify the return is truly wet-only.

Machine-readable contract

The category IDs, eligible plugins, wet defaults and safety flags are listed in the Preset Catalog PDF.
