
DIHWorld Audio Welcome Package

Current authority: 2026-08-20

Start Here

DIHWorld_Audio_Complete_Manual_CURRENT.pdf is the single go-to user reference for the current DIH 42. It covers all 42 plugins across 13 primary families, current controls, family placement, routing, preset law, gain guidance, and technical reference information.

The routing quick reference and template starter pack are supplementary documents. If a supplementary document appears to conflict with the complete manual, follow the complete manual and report the discrepancy.

Choose The Correct Platform

- **macOS release:** install Audio Unit (AU) for Logic Pro or VST3 for a compatible VST3 host. The current Mac release is Developer ID signed, Apple-notarized, stapled, and Gatekeeper accepted.
- **Windows beta:** install the supplied 64-bit VST3 beta only. The beta is unsigned and is not a production or public release. Read 00B_WINDOWS_BETA_TESTER_START_HERE.pdf before installing it.
- Standalone applications or other source build targets are not included unless the specific installer explicitly lists them.
- Do not mix historical installers with the current package. Use one current individual, family, Core, or Complete installer path for the products you are testing.

Canon Essentials

- One normalized control equals $\text{PHI}/2$, or 0.809016994 .
- Normalized knob travel runs from 7 o'clock at zero to 5 o'clock at one.
- Start new routing work near -18 dBFS ; -14 dBFS to -10 dBFS is often practical depending on source and use case.
- Use no more than three active mastering processors in a musical pass: one preparation stage, one balance or field stage, and ANKH for containment.
- SESHAT belongs last as observation only and is not a tone-shaping stage.
- Presets expose musical range but do not control protected Input, Mix, Output, Power, Bypass, or final ceiling unless a plugin's explicit canon requires it.
- DIHMOTION is retired and replaced by NSR.
- GOLD is a DIHWorld Audio microphone; Golden is a separate DMI Track synthesizer.

Package Contents

- Complete manual: the current user and technical authority.
- Signal Flow & Sidechain Guide: host routing and control behavior for ANUBIS, TEHUTI, MARIANA, MONOLITH, NTRPL, and DrumKrushGlue, plus Drum Morpher source routing.

-
- Routing quick reference: illustrated bus routing and 42-plugin placement guide, plus a dynamics/kick-key/duck appendix.
 - Template starter pack: compressed starting points only, with no case-study results or guaranteed output targets.
 - Family purchases: the purchased family's focused user and technical manuals accompany that family installer.
 - Complete bundle: the consolidated complete manual and complete customer documentation folder accompany the bulk installer.
 - Windows beta: the dedicated beta start sheet explains unsigned-installer warnings, VST3 placement, host rescanning, reporting, and rollback.
 - Legal: the current customer EULA accompanies commercial installers. Internal release checklists are not customer documentation.

Release Status

The Mac release passed signing, notarization, stapling, Gatekeeper, and hash gates. Windows is an explicitly unsigned private beta. `CURRENT_RELEASE_INDEX.md` is the final release authority.
